

covalent bonds unit 3 pdf

A covalent bond, also called a molecular bond, is a chemical bond that involves the sharing of electron pairs between atoms. These electron pairs are known as shared pairs or bonding pairs, and the stable balance of attractive and repulsive forces between atoms, when they share electrons, is known as covalent bonding.

Disulphide bonds play an important role in determining the structure and properties of gluten proteins. Monomeric α - and β -gliadins present three and four intrachain disulphide bonds, respectively, whereas polymeric LMW- and HMW-GS include both intra- and interchain bonds (Shewry and Tatham, 1997).
